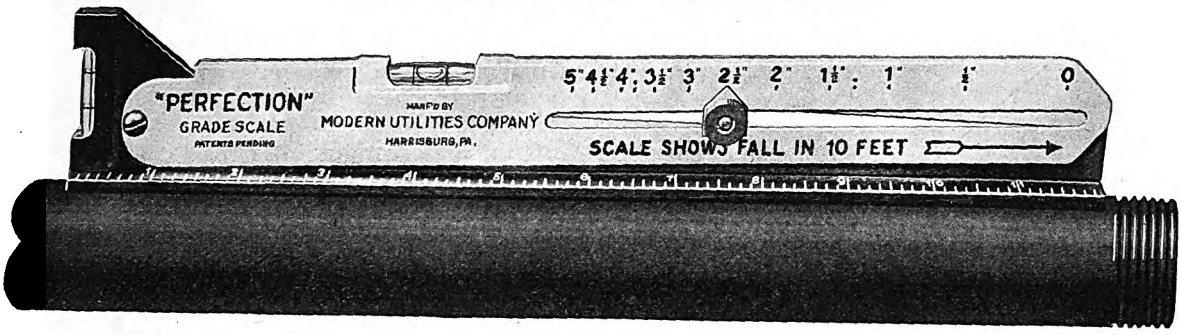
MODERN UTILITIES COMPANY 140-42 S. Second St. HARRISBURG, PA.

The "Perfection" Grade Scale



The "Perfection" Grade Scale was designed primarily for Plumbers and Steam Fitters, to aid in the installation of Hot Water, Steam and Vapor heating systems, Sprinkler systems, sanitary plumbing work, duct work, etc., but is equally valuable to Builders, Metal Workers, Cement and Concrete Workers, and all other classes of mechanics who erect work to a grade.

This tool is simply constructed, easily understood, compact, accurate at all times, and will last many years. It will withstand the bumps of the ordinary tool kit without affecting its accuracy in any way.

By using the "Perfection" Grade Scale, the mechanic is enabled to readily establish uniform and accurate grades for all pipe lines, thereby insuring rapid and even circulation in Hot Water heating systems. Eliminating pockets and traps in Steam and Vapor systems permits easy flow of steam, rapid venting, quick return of condensation, steady water line, etc., thereby preventing the hammering and noise caused by improper grading. Correct grades in plumbing work for under-floor pipe lines or underground sewerage lines are likewise very important and readily obtainable with this convenient tool.

The "Perfection" Grade Scale is so constructed that the direction and amount of fall from 0 to 5 inches in 10 feet is indicated at a glance. The adjustment is very simple and absolutely accurate. In use, the workman merely adjusts the indicator to the grade desired as shown on the scale bar, places tool on work to be graded with arrow or pointed end in the direction of desired fall. When bubble shows "level" it is then true to the grade indicated. When indicator is set at 0 the tool is used as an ordinary level. Used also for plumbing vertical pipes and risers, etc. The double 12-inch rule with ⅛-inch graduations on base permits reading measurements from either direction.

A FOUR-IN-ONE tool for Grading, Leveling, Plumbing, and Measuring. It is a well-made, good-looking tool that won't rust or get out of order. Practical, accurate, convenient, and durable. Saves time, prevents mistakes, and produces better work.

The "Perfection" Grade Scale has the Base Section finished in black, and the Scale Bar is Nickel Plated, with letters and figures depressed and colored yellow, forming a contrast which makes for easy reading in dark cellars, etc. It is regularly packed in a strong oak box, but can also be supplied in a durable leather case for Architects, Engineers, etc.
